Office Action Summary	Application No. 10/688,718	Applicant(s) LEMMON, JACK D.	
	Examiner Bruce E. Snow	Art Unit 3738	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Response to Arguments

Applicant's amendments and arguments filed 9/8/06 have been fully considered but they are persuasive to overcome the rejection as anticipated by Johnson et al (2004/0024451).

Allowable Subject Matter

Claims 1-8, 12, 13, 15-19, 38, and 40-42 allowed.

Claim 24 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 11 and 14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 11 depends from cancelled claim 10.

Claim 14 has been added back into prosecution. The claimed configuration is unclear. Please direct to the specification and drawings for support.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 20-22, 25-28, and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Love et al (6,678,962) in view of Schoon et al (6,719,785).

Love et al teaches:

20. (Currently Amended) A sizer assembly for evaluating a valve annulus to determine a size of a prosthetic heart valve to be sewn to the valve annulus during heart valve replacement surgery, the prosthetic heart valve including an annular extension having a first flexibility and a sewing ring having a second flexibility, the sizer assembly comprising:

a handle defining a first end and a second end (inherent, see handle socket 4);

and

a flexible sizer body coupled with the first end of the handle, the flexible sizer body including (regarding flexible, see 2:25-31):

an outer ring 1 (outer generally meaning not being in the center, towards the outside),

an annular wall 2 coupled to and extending from the outer ring, wherein the annular wall forms a plurality of extremities 2c configured to deflect inwardly;

wherein the extremities define a proximal side of the sizer body;

and further wherein the sizer assembly is characterized by the absence of leaflets connected to the extremities;

However, Love et al is not clear as to “wherein the handle extends proximally from the sizer body such that a longitudinal length between the extremities and the second end is less than a longitudinal length between the outer ring and the second end.” Schoon et al teaches a similar sizer wherein the handle attaches in the direction as claimed; see figure 2. It would have been obvious to one having ordinary skill in the art to attach the handle of Love et al in the claimed orientation as claimed and taught by Schoon et al when measuring the aorta.
